Personal summary

I love optimization tasks.

Passionate data scientist and Python developer with a year experience in data mining and Python coding. Currently I am working on the creation of another Telegram bot that records text, audio and video complaints of visitors for my company and a program for calculating the timetable for electric transport routes in our city.

Python became the best programming language for me after getting to know C++)

I believe that programming is the future. After 5-7 years, I see myself as a team lead, because my soft skills are at a very high level due to my experience in conflict resolution and production process organization.

Technology stack:

- Python framework: numpy, pandas, pyTelegramBotAPI, Flask, Django, smtplib.
- Exploratory Data Analysis (EDA): feature engineering, feature selection, preprocessing e.t.c;
- Data visualization: plotly.express, seaborn, matplotlib
- SQL, MongoDB, Amazon S3, Docker.
- JSON, XML, HTML, web-scraping;
- MobaXtrem, lifecycle from scratch to deploy and supporting on AWS server.

Experience

Telegram bot that registers visitors to the excursion group and receives responds: https://t.me/OMET_tour_bot

Bank – attract customers to open a deposit. Data analysis, identification, of patterns and the search for decisive factors that influenced the fact that the client invested in this bank

Online store-segment existing customers, interpret these segments and determine the strategy of interaction with them. Construction of a model of clustering of clients on the basis of their purchasing power, frequency of orders and the term of the last purchase.
